

## Nano Pro MT™ Penetrant Oil FAQ's

Q. Is Nano Pro MT™ Penetrant Oil product flammable?

A. No, Nano Pro MT™ Penetrant Oil is rated as a non-flammable product and safe for storage on boats, control rooms, utility trucks, service garages, and more.

Q. Why does Nano Pro MT™ Penetrant Oil spray out as a foaming product?

A. Nano Pro MT™ Penetrant Oil is designed to stay where it's sprayed. Traditional penetrant oils can run off their desired target, dripping like liquid from a faucet. Then, you have more on the ground than on the job. For example, during a brake job, penetrant oils are usually sprayed in an inverted state, and most of the product winds up on the ground. The foam of Nano Pro MT™ Penetrant Oil needs a smaller application size where desired, and the foam does the work of staying put to penetrate and lubricate. Nano Pro MT™ Penetrant Oil also penetrates rust at the nano level, deeper than most chemical surfactants can. The nano particles creep deep into the pores and interfaces of the metal, freeing rusty metal bolts with ease; you use less of our product and get better results. (Note: High heat turbo housings and exhaust manifold bolts may require additional time for the product to do its job.)

Q. Is Nano Pro MT™ Penetrant Oil only penetrant oil?

A. No, our product is a 3 in 1. Nano Pro MT™ Penetrant Oil does 3 different things- it is a penetrant oil, a lubricant, and has anti-corrosion properties. When space is at a premium, or you just want to have one go to product in your garage or shop this is it. Many products on the market only penetrate, we lubricate as well, leaving a surface that fights corrosion.

Q. How is Nano Pro MT™ Penetrant Oil different than most penetrants in the marketplace?

A. Nano Pro MT™ Penetrant Oil active ingredients penetrate metal at the Nano (billionth of a meter) level, which is the smallest measurable level than can elicit a physical change outside the sub-atomic or pico (trillionth a meter) level. All this means is that our particles work at levels never before seen.

Q. Does Nano Pro MT™ Penetrant Oil product contain any solvents?

A. No

Q. Can Nano Pro MT™ Penetrant Oil be used as a gun lube?

A. Yes, people and manufacturers subscribe to one of two schools when it comes to gun lube. Some like wet and some like dry. It actually depends on the application depending on the gun platform and component you are lubing. Slides typically use our Nano Pro MT™ Dry Lubricant, and other components that are less prone to dust use the Can Nano Pro MT™ Penetrant Oil, both on the same gun. Our products are being used by large metropolitan police departments now. (Strict non-endorsement contracts prohibit us from saying which forces.)
